

# K.S.D.A Meeting Agenda

*December, 3rd 2021*

## Progress Report:

- We are behind on
  - Comments: create, delete, (comment on comments)
  - Users: admin/non admin
- Difficulties:
  - Issues getting code to work when everyone is simultaneously making changes
- Changes to project plan:
  - We may have to cut some things or simplify concepts for the final since we are slightly behind for the MVP

## Map Incorporation:

- We would like to incorporate a map on the main page as well as when creating a request as you suggested. We tried integrating mapbox, but had some package dependency difficulties (with mglbox and sass-loader) do you have any suggestions?

## Tagging:

- How we should best highlight tags on requests, Daniel had some suggestions to make those more of a main part of the request
- How we should handle user inputted tags
- How to have default tags already in database?

## Other Questions:

- How important is the UI/UX vs just the functionality?
